

Parallel Flange Sections (**NEX**) From SAIL

& *Conventional Structural* from SAIL

NEX
From SAIL
The Future in Steel Design

SAIL is one of India's largest and leading steel manufacturer and possesses a robust knowhow and expertise to produce a wide variety of prime steel products such as plates, sheets, coils, bars, structural, rails, pipes etc. for various applications.

With the installation of a new state-of-the -art Universal Section Mill at IISCO Steel Plant, Burnpur and Medium Structural Mill at Durgapur Steel Plant, SAIL is now in a position to supply a wide variety of Parallel Flange Sections and Conventional Structurals with high quality and consistent dimension to meet the requirement of the construction and infrastructure demand of the country.

SAIL is continuously thriving in its endeavor through investment in technology up gradation, research & development and services to ensure the quality of high performing end products.

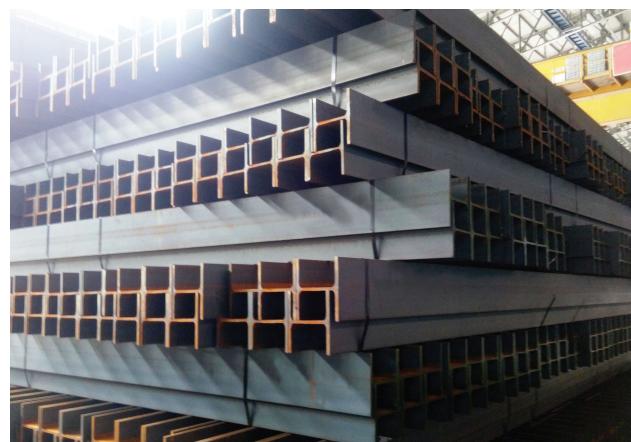

PRODUCT RANGE

Parallel Flange Sections

Section	Weight (Kg/m)	Plant	Mill	Equivalent European I Beam
Narrow Parallel Flange Beams				
NPB 100 x 55	8.10	DSP	MSM	IPE 100
NPB 200 x 100	22.36/25.09	DSP	MSM	IPE 200/IPE 200O
NPB 250 x 125	30.11	DSP	MSM

Angle 150 x 150 x 10/12	22.93/27.29	ISP	USM
Angle 200 x 200 x 12/16/18/20/25	36.85/48.53/54.3/59.96/73.90	ISP	USM

Besides our Plant rolled sections, we can also supply the following range through our EPAs

Angle 45 mm to 150 mm
 MC 75 x 40 mm to MC 400 x 100 mm
 MB 100 mm to MB 600 mm
 H Beams : 150 mm , 152 mm & 200 mm
 Rail : 15 kg, 30 kg
 Flats : 50 x 6 to 150 x 12 mm
 Mild Steel Rounds

MSM - Medium Structural Mill
 USM - Universal Section Mill
 MM - Merchant Mill
 ISP - IISCO Steel Plant
 DSP - Durgapur Steel Plant
 BSP - Bhilai Steel Plant
 EPA - External Processing Agency

AVAILABLE GRADES/QUALITIES

- IS 2062 E250BR, 300BR, 350BR, 410BR, 450BR (Copper Bearing Structural and structural in Grade B0 & Grade C can also be supplied with mutual agreement.)
- EN 10025 2 S275 JR, S355 JR

In addition to above structural in FIRE RESISTANT STEEL and WEATHER RESISTANT STEEL can also be supplied.

Sections from MSM & USM are normally supplied in 12 meter length. However specific lengths can be supplied with mutual agreement

Testing facilities available - Tensile, bend, impact testing (including subzero temp testing) and inspection of finished products

Bundling- Automatic strapping & bundling facility with tagging

Mill Certifications available with MSM of DSP

- CE Certificate
- Certificate from CSIR and CBRI, Roorkee for Fire Resistant Steel

OUR LATEST PRODUCT IS

The Future in Steel Design

Parallel Flange Sections

From SAIL's state-of-the-art mills

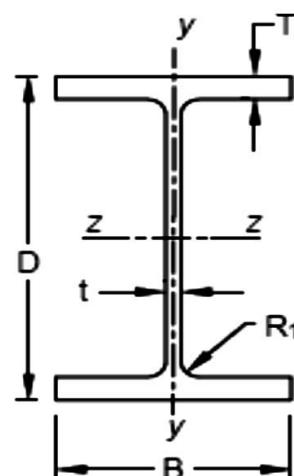

Parallel Flange Sections are hot rolled steel structural sections, with parallel flanges having square toes and curves at the root of flange and web

Parallel Flange Sections meet international standards of quality and stringent requirements of the infrastructure and construction industries

Parallel sections are preferred by today's structural engineers, architects and construction companies

Parallel Flange Sections have multiple advantages over conventional sections

Higher product flexibility - Wide range of width, flange thickness and web thickness combinations for any nominal depth

- D : Depth
- B : Flange Width
- T : Flange thickness
- t : Web thickness
- R₁ : Root radius

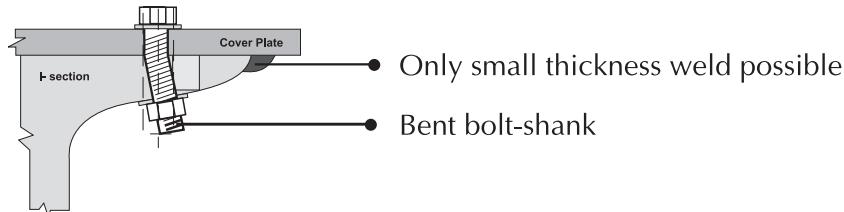

Mechanically more efficient - Higher bending strength for beams and higher axial load carrying capacity for columns

Structurally more stable - Greater radius of gyration lowers slenderness ratio and allows withstanding of buckling to a greater extent

Lighter structures - Higher strength to-weight ratio leads to lighter structures and foundations

Parallel Flange Sections have multiple advantages over conventional sections

Easier fabrication - Easier connection of joints by direct bolting on flanges without using tapered washes and easier butt welding of plate at edge of flange

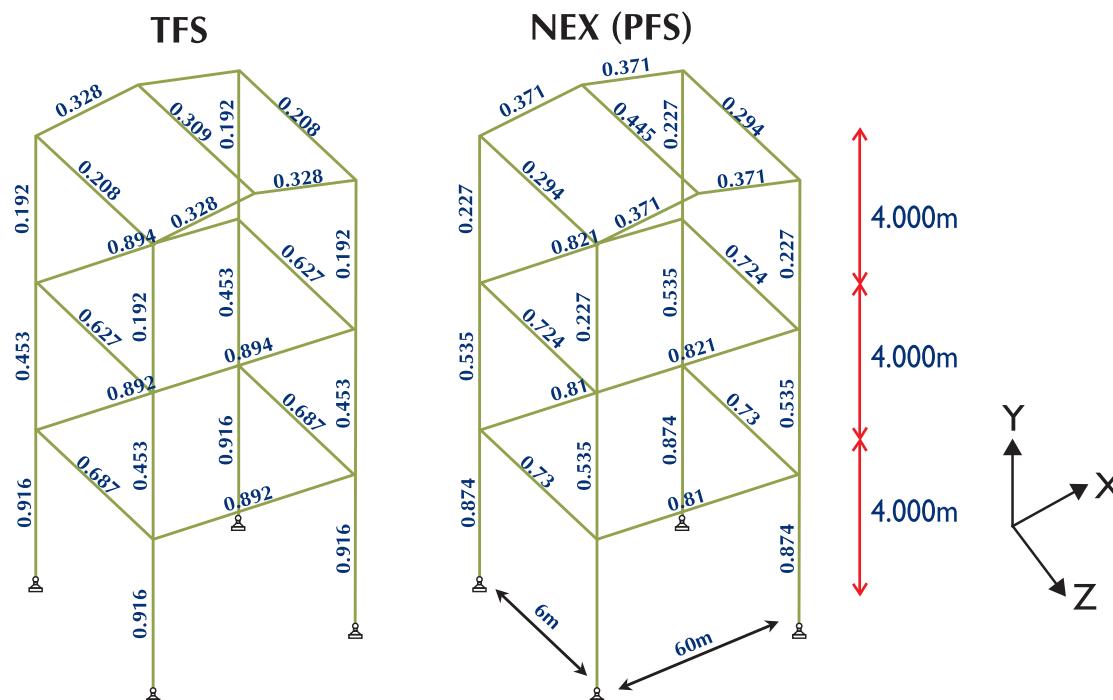

Economical - Substantial saving in material weight when used as compression member (columns) or flexural member (beams)

Type	Size	Weight Kg/m	Area (Sq.cm.)	Radius of Gyration (cm.)
ISMB	600x210	121.00	154	4.08
NPB	600x210	122.45	155	4.66
WPB	400x300	124.80	158	7.33

Section	Mass (Kg/m)	Section Modulus about major axis (cm ³)
MB 400	61.55	1020
NPB 400x180x57.38	57.38	1020

NEX Parallel Flange Sections are more efficient and provide more economic designs.
e.g. **UTILISATION RATIO** of sections

Max utilisation ratio of the Conventional section used:

Top Beams: MB250 - 0.328
Mid Beams: MB350 - 0.894
Lower Beams: MB450 - 0.892
Columns: MB600 - 0.916

Max utilisation ratio of the Parallel Flange section used:

Top Beams: NPB250x30.11 - 0.371
Mid Beams: NPB300x49.32 - 0.821
Lower Beams: NPB400x66.31 - 0.81
Columns: WPB240x83.2 - 0.874

The ratio of calculated design load on any structural member to its load-carrying capacity is known as UTILISATION RATIO which should normally be less than one

Loading conditions

- Dead Load of 400 kg/m on floor beams & 100 kg/m on roof beams.
- Live Load of 1000 kg/m² on lower level floor beams & 600 kg/m² on mid level floor and 200 kg/m on roof beams.
- Wind Load of 300 kg/m on each column in both X & Z direction.
- Comparison of the weight of structure, for the above example, is given below:

Conventional Section	Weight in Tons	Parallel Flange Section	Weight in Tons
MB 600 x 123.0	5.79	WPB 240 x 83.20	3.985
MB 450 x 72.4	1.735	WPB 400 x 66.31	1.588
MB 350 x 52.4	1.254	WPB 300 x 49.32	1.181
MB 250 x 37.3	1.125	NPB 250 x 30.11	0.906
Total	9.904	Total	7.661

23% saving in weight is realised by using NEX Parallel Flange Section instead of Conventional sections for the example shown

- Greater efficiency of the Parallel Flange Sections is primarily due to better distribution of material across the section. This leads to greater moment of inertia, section modulus and radius of gyration. Consequently PFS has more load carrying capacity.

ADVANTAGES OF USING HIGH TENSILE SECTIONS

- ▶ Lighter super structure
- ▶ Upfront savings in cost due to lesser weight of steel
- ▶ Reduced depth of beams
- ▶ Greater load carrying capacity for same depth of columns used in mild steel
- ▶ Lower transportation, handling and erection costs due to lower weight of structure

NEX AS ELECTRIC POLE (WPB 160)

Dimensions (mm)									
Section	Mass (Kg/m)	Sectional Area (cm ²)	D (Depth)	B (Width)	t (Web thick)	T (Flange thick)	Flange Slope, a deg	R ₁ (Root Radius)	R ₂
WPB 160	30.44	38.78	152	160	6	9	-	15	-

Sectional Properties									
		Moment of Inertia		Radius of Gyration		Section Modulus		Plastic Section Modulus	
Section	Mass (Kg/m)	I _x (cm ⁴)	I _y (cm ⁴)	R _x (cm)	R _y (cm)	Z _x (cm ³)	Z _y (cm ³)	Z _{px} (cm ³)	Z _{py} (cm ³)
WPB 160x160	30.44	1670	615	6.56	3.98	220	76.9	245	117

Advantages of using NEX (WPB 160) as electric pole

1. Comparatively lighter steel member with higher section modulus
2. Saving in cost due to lower weight of steel member
3. Easier connection due to parallel flanges
4. Lower transportation, handling and erection cost owing to lighter members
5. Superior finish from state-of-the-art mills
6. Supply in specific lengths as per requirement

Dimensional & Sectional Properties (Conforming to IS 808:2021)

Tolerances will be conforming IS 1852 : 1985

Application of NEX

Flyovers

Stadiums

Metro Rails / Indian Railways

Foot Over Bridges

Multi-level Car Parks

Industrial Buildings

Raw Material Handling Plants

Residential Complexes

Commercial Complexes

Power Plants

Ports / Offshore Structures

Oil Refineries / Petrochemical Plants

Electric Poles (Masts)

Trailer and Truck Bed Frames

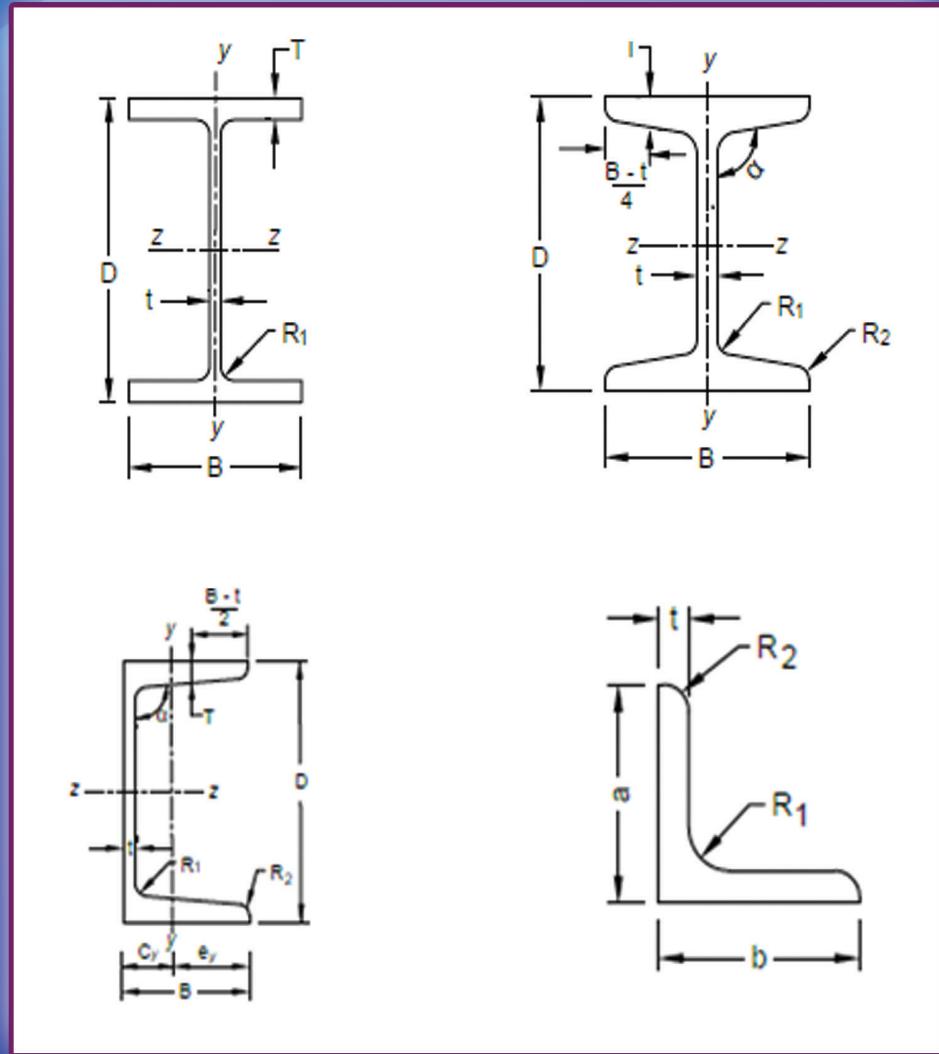

NEX

From SAIL

The Future in Steel Design

Some of our valued customers using NEX Parallel Flange Sections

स्टील अथॉरिटी ऑफ इण्डिया लिमिटेड
STEEL AUTHORITY OF INDIA LIMITED
